## Software used to produce this site.

---

In case anyone is wondering....

I use a Content Management System (CMS) called Joomla with various installed components, i.e., Fireboard for the forum, DocMan for the downloads/uploads section, Zoom for the Gallery, and a very powerful component called TNG for the genealogy database.

I use Legacy Family Tree at home to catalog my genealogy info. Export it to a gedcom then upload it to the site.

Technology is truly wonderful for those of us that are researching our family lines.

Joe
